NSS 75th Round
Final Multiplier-posted unit-level data
for Schedule- 25.0 of NSS 75th round

A) Data for Sch. 25.0 (Social Consumption: Health).

There are 13 data files belonging to 13 different levels as per layout (datalay75_250.XLS).

File names	No. of Records
R75250L01.TXT	113823
R75250L02.TXT	113823
R75250L03.TXT	555352
R75250L04.TXT	2537
R75250L05.TXT	93925
R75250L06.TXT	93925
R75250L07.TXT	93925
R75250L08.TXT	43240
R75250L09.TXT	43240
R75250L10.TXT	43240
R75250L11.TXT	42762
R75250L12.TXT	70258
R75250L13.TXT	32257
Total	1342307

Record length for data is 142.

B) Note for users:

1. These level wise data files are text data with fixed record-length of 142 characters. First 126 bytes are data, followed by 3 bytes comprise of number of first stage units surveyed within a substratum for the sub-sample (NSS) and next 3 bytes for number of first stage units surveyed within a substratum for sub-sample combined (NSC) and next 10 bytes are weight or multiplier (in two places of decimal) within a substratum for the sub-sample (MLT). Last byte is for Newline character.
2. The Layout of data is given in the MS Excel-file `datalay75250.XLS`.
3. In case of those Blocks/Levels, where Person/SI.No./Hospital SI.No./Ailment SI.No. etc is not applicable, the field is filled up with "00000".
4. For the place of treatment code other than 5 in item 18 of block 7, the state code in item 19 of block 7 has been auto-generated as the state code of the FSU for tabulation purpose. Similarly, for the place of treatment code other than 5 in item 21 of block 9 the state code in item 22 of block 9 has been auto-generated as the state code of the FSU for tabulation purpose.
5. In the value fields (in Rs.) the numeric figure is given in whole number.
6. For generating any estimate, one has to extract relevant portion of the data, and aggregate after applying the weights.
7. Weights (or multipliers) are given at the end of each record from 133th byte onwards. The weights (multipliers) are Sub-sample-wise, details of which are as given below:
(For description of Sub-sample, please see Instructions Manual, NSS 75th Round, for field staff)

NSS, NSC and Sub-sample-wise weights (all sub-round multipliers):

NSS = Bytes 127-129 (3 bytes)

NSC = Bytes 130-132 (3 bytes)

MLT = Bytes 133-142 (10 bytes, assumed two places of decimal)

All records of a second stage stratum will have same weight figure.

8. Use of Sub-sample-wise weights (all sub-round multipliers)

For generating Sub-sample-wise estimates based on data of all sub-rounds taken together, either Sub-sample-1 FSU's or Sub-sample-2 FSU's are to be considered at one time. Sub-sample code is available in the data file at 26th byte (Please see layout of data i.e., `datalay75_250.XLS`).

Apply final weight for Sub-sample wise estimates as follows:

$$\text{Final Weight} = \text{MLT}/100$$

For generating Sub-sample-combined estimates based on data of all sub-rounds taken together, both Sub-sample-1 FSU's and Sub-sample-2 FSU's are to be considered.

Apply final weight for Sub-sample combined estimates as follows:

$$\begin{aligned}\text{Final weight} &= \text{MLT}/100, \text{ if } \text{NSS}=\text{NSC} \\ &= \text{MLT}/200 \text{ otherwise.}\end{aligned}$$

9. Common Primary Key for identification of a record for any schedule is:

FSU Serial Number	= 4(5) (i.e., offset = 4th byte, length = 5 bytes)
Segment Number	= 31(1)
Second Stage Stratum Number	= 32(1)
household Number	= 33(2)
Level Number	= 35(2)
Person slno/hospital slno/ailment slno	= 37(5)

10. List of Documents

- a) General Information ----- README75_250.doc
- b) Text Data Layout ----- datalay75_250.XLS
- c) Blank schedule 0.0 ----- sch0.0.pdf
- d) Blank schedule 25.0 ----- sch25.0.pdf
- e) Estimation procedure note for 75th round ----- Estimation_Procedure_NSS_75.pdf
- f) Instructions Manual for field staff, NSS 75th Round.
